

MADE IN USA

SINGLE HEAD POLISHER

Wilson Industrial Electric's Single Head Polisher can be built to run over a raised table or to operate from the floor. Wilson produces 2 types of polishers: We have a simple hydraulic pressure version and the newer air pressure version. The hydraulic version works well for granite and harder stones. The air pressure version was developed to work with hard stone as well as limestone, concrete, and softer stones. Both machines can be taught up to 8 points on each slab of stone and allows you to polish stone from corner to corner and edge to edge. Each style of polisher can be ordered with an integrated head changer capable of changing up to 14 heads from a stationary rack at the center or one end of the bed.

Thank you for your continued support of our family owned & operated business for the last 39 years.
